

# HI & LO FOAM FOOD PROCESSING CLEANER

## Performance Focus

The product range consists of a low foam and a high foam solution both of which offer all of the key performance characteristics outlined below.

The Low Foam Cleaner and Sanitiser is designed to provide a hygiene and cleaning solution for horizontal and vertical surfaces that do not require prolonged chemical contact times.

The High Foam Cleaner and Sanitiser is designed for vertical surfaces where prolonged chemical contact times are required to firstly wet and then remove dried on protein and organic debris.

These products are designed to be applied either manually or through a CIP spray system or via high pressure washing machines or floor scrubbers.

## Product Applications

These products are recommended for the following applications:

*Walls  
Utensils*

*Plant & machinery  
Floors*

*Ceilings  
Prep tables*

## Key Performance Characteristics

The Bioguard Heavy-Duty Non-Hazardous range of products have been formulated to provide a user friendly non-hazardous alternative to the more traditionally used caustic, chlorinated and oxidising compounds.

Working closely with leading product users, our research and development team have formulated a heavy duty non-hazardous cleaning and sanitising product range for the effective removal of oils, fats, organic debris and starches. Our customers confirm that our products unique features give significant performance advantages over the more traditionally used chemicals. These performance benefits include:-

- ◆ **Ease of Use** - Our products provide a single combined cleaning and sanitising action, eliminating the usual multi-phase operations of pre-rinse cleaning, post-rinse cleaning, pre-rinse sanitising and post-rinse sanitising which are common for many of the alternative cleaning systems.
